## Reverse an Array

Difficulty: Easy

Accuracy: 55.32%

Submissions: 86K+

Points: 2

You are given an array of integers `arr[]`. Your task is to **reverse** the given array.

### Examples:

**Input:** `arr = [1, 4, 3, 2, 6, 5]`

**Output:** `[5, 6, 2, 3, 4, 1]`

**Explanation:** The elements of the array are 1 4 3 2 6 5. After reversing the array, the first element goes to the last position, the second element goes to the second last position and so on. Hence, the answer is 5 6 2 3 4 1.

**Input:** `arr = [4, 5, 2]`

**Output:** `[2, 5, 4]`

**Explanation:** The elements of the array are 4 5 2. The reversed array will be 2 5 4.

**Input:** `arr = [1]`

**Output:** `[1]`

**Explanation:** The array has only single element, hence the reversed array is same as the original.
